

# Rubbish Science

A guide to teaching students science using **ONLY** items from the recycling bin

**Information Guide**

**£12.00 each**

**High level learning outcome**

**Low cost practicals**

**Very low CARBON FOOTPRINT**

The ethos behind this work is that everyone can have a good basic start in science.

This course is 99% recyclable meaning there is no harm to the environment!! It is sourced with recycled rubbish which is free and reuses unwanted, thrown away items.

Great scientists like 'Robert Hooke working with springs', 'Isaac Newton watching apples fall' are examples that deep concepts can be discovered using simple materials. It is the 'thinking' that leads to discovery.

Young people loving the environment and understanding their responsibilities to it in the future is very precious. The overall message is to encourage future generations, at a young age, to think about a cleaner, greener and happier planet.
